

AMENDMENTS TO THE SPECIFICATION

Please replace Paragraph [0041] with the following paragraph rewritten in amendment format:

[0041] In the first backup cleaning bath 602 and the second backup cleaning bath 603, a hydrocarbon-based cleaning liquid is stored which is composed of a normal paraffin, such as normal nonane or normal decane, as a primary component and a surfactant as an additive. The surfactant described above is, for example, a fatty acid alkanol amide, or a fatty acid N-alkyl alkylene diamine, and the additive described above is added at a content of, for example, 5 wt% or less. In this embodiment, as the additives, a fatty acid alkanol amide represented by the formula shown below,

C 1
 $R^{¹}CON(R^{²}OH)^{₂} \bullet NH(R^{²}OH)^{₂}$ (in which $\underline{R^1}$ $R^{¹}$ and $\underline{R^2}$ $R^{²}$ are alkyl groups), and a fatty acid N-alkyl alkylene diamine represented by the formula shown below,

$R^{³}NH \bullet R^{⁴}H_2 \bullet 2R^{⁵}COOH$ (in which $\underline{R^3}$ $R^{³}$ and $\underline{R^5}$ $R^{⁵}$ are alkyl groups, and R^4 $R^{⁴}$ is an alkylene group) are added at a content of 5 wt% or less, respectively.
